- Cinema 4D
- Adobe CS
- Microsoft Office

About my life

I was born on January 23, 1991 in Ljubljana and am currently living in Selo pri Ihanu (just 15km away from the center of Ljubljana). In teenage years I attended Diocesan Classical Gymnasium in Ljubljana, where I studied 3 foreign languages: **English, French** and **Latin**. In that time I also started to develop my photography skills. I had my first photography exhibition at the age 15 and right after that I started with **concert photography** for news portal studentarija.net. In high school I already showed my interest for informatics and I successfully finished the **Cisco CCNA 1** course.

The first major I took in university was **Media communications (Visual communications)** at the Faculty of Electrical Engineering and Computer Science. At the end of year 1 I got the **scholarship for the gifted** from the Slovenian government. I realized I want more from my education and I really liked few programming courses we had, so I signed up for the second major at the faculty: **Computer Science and Information Technologies**.

I used my free time at the university for concert photography for the student organization and singing at Academic choir of Maribor. Winning top places of international choir competitions demanded great team work and dedication.

Before the **second-degree study of Informatics and Technologies of Communication** I took a year to get some practical experience. I worked for the company **Neosys d.o.o.**, where I worked as a full-stack programmer for **banking solutions**.

I finished the media communication studies with thesis: "**Practical aspects and postproduction of concert photography**", looking forward to new studying adventures.

I spent the last year as a **freelancer** within the family company **Celit d.o.o.**. I spent a lot of time learning front-end development (**Angular JS** and **Angular 2**). My biggest accomplishments of the past year are a successful launch of a project **kmetijskatrznica.si** and **winning a Heckaton competition** of Abanka bank and a few months later coming second in another Heckaton, this time from Triglav insurance company. They offered me a position to work on their "startup" for next half a year and I accepted.

Right now I am working on the mentioned project and at the same time doing some extra work on the side, looking forward to the adventures life brings my way.

Who am I?

I am ambitious, communicative and curious person. I like to help people and I love to learn about everything - from how to use new technology to how the black holes are created. My favorite way to spend the free time is singing, running around the flag football field, doing sport or concert photography and skiing the slopes.
